Title: REWIRING SUBSTRATE STRIP WITH SEVERAL SEMICONDUCTOR COMPONENT POSITIONS

IN THE ABSTRACT

Please amend the abstract as follows:

~~THE INVENTION RELATES TO A REWIRING SUBSTRATE STRIP AND TO A
METHOD FOR PRODUCING IT~~

A rewiring substrate strip and a method of producing a rewiring substrate strip is disclosed. In one embodiment, the rewiring substrate strip has several semiconductor component positions for semiconductor components. The semiconductor component positions are arranged in rows and columns. In this arrangement, several semiconductor component positions are combined to form one component group. The semiconductor components of a component group are arranged with respect to one another in such a manner that an individual semiconductor component is rotated by 90° with respect to four adjacent semiconductor components.
